College Student Project — Guidelines

A general reference for planning, executing, and submitting your academic project

This document lays out a standard set of guidelines that most college/university projects follow. Since exact rules vary by department, always cross-check these against your subject's specific guideline sheet given by your guide/HOD.

1. Objective of the Project

The project should demonstrate your understanding of the subject through practical application, research, and analysis. It should clearly define a problem statement, the approach used to solve it, and the outcome/learning achieved.

2. Team Formation and Guide Allocation

- Group size: usually 1–4 students per project (confirm with your department).
- Each group is assigned a faculty guide/mentor who approves the topic and reviews progress.
- Topic selection should be finalized and approved within the first 1–2 weeks.
- Maintain regular contact with your guide for feedback at each stage.

3. Suggested Timeline

Phase	Task	Typical Duration
Phase 1	Topic selection & approval	Week 1–2
Phase 2	Literature review / background research	Week 3–4
Phase 3	Design / methodology / planning	Week 5–6
Phase 4	Implementation / development / data collection	Week 7–10
Phase 5	Testing, analysis & results	Week 11–12
Phase 6	Report writing & final submission	Week 13–14
Phase 7	Presentation / viva voce	Week 15

4. Report Structure

A typical project report follows this order (adjust as per your institute's format):

- Cover page (title, name, roll no., guide's name, college name, year)
- Certificate page (signed by guide/HOD)
- Acknowledgement
- Abstract / Executive summary (150–250 words)
- Table of contents
- Introduction (background, problem statement, objectives, scope)

- Literature review / existing system
- Methodology / system design / approach used
- Implementation details (with diagrams, screenshots, code snippets if applicable)
- Results and discussion
- Conclusion and future scope
- References / bibliography (in a consistent citation style, e.g., APA/IEEE)
- Appendices (raw data, extra diagrams, questionnaires, etc.)

5. Formatting Rules (Typical)

Element	Standard
Font	Times New Roman / Arial, 12 pt for body text
Line spacing	1.5
Margins	1 inch (2.54 cm) on all sides
Page numbers	Bottom-center or bottom-right
Headings	Bold, numbered (1, 1.1, 1.1.1...)
Length	As specified by department (commonly 25–60 pages)
File format	PDF, unless a hard/spiral-bound copy is required

6. Evaluation Criteria (Common Weightage)

Criterion	Typical Weightage
Relevance & originality of topic	10%
Methodology & implementation quality	30%
Report writing & documentation	20%
Results, analysis & conclusions	20%
Presentation / viva performance	20%

7. Submission Guidelines

- Submit both a soft copy (PDF, emailed or uploaded to the college portal) and a hard copy (spiral/hard-bound) if required.
- Name your file clearly, e.g. RollNo_Name_ProjectTitle.pdf
- Double-check that the certificate page is signed before final submission.
- Keep a backup of all source files, data, and drafts until final grades are declared.
- Submit strictly before the deadline — late submissions may attract a grade penalty.

8. Academic Integrity

Plagiarism is taken seriously — cite every source you refer to. Most colleges require a plagiarism/similarity score below 15–20% (check your institute's exact limit). Do not copy code, text, or data without attribution. Use tools like Turnitin, Grammarly, or your library's plagiarism checker before final submission.

9. Presentation and Viva Tips

- Prepare a concise slide deck (10–15 slides) covering objective, method, results, and conclusion.
- Practice explaining your project in under 5 minutes.
- Be ready to answer 'why' questions about your choices (why this topic, why this method, etc.).
- Bring a printed copy of your report and any supporting material to the viva.

Note: This is a general-purpose template. Always confirm exact requirements (page count, format, deadlines, plagiarism limits) with your college/department guidelines.
